

M/Y HARBOUR ISLAND *Mechanical Servicing Schedule*

NUMBER	EQUIPMENT	PERIOD
M01	WATER MAKERS	WEEKLY

Estimated Time to Complete Task: 10 Minutes

THESE WATER MAKERS FROM FCI DO HAVE AN AUTOMATIC FLUSH CYCLE THAT WILL SWITCH THEMSELVES ON AT PRE DETERMINED INTERVALS SUCH AS EVERY SIX OR SEVEN DAYS. HOWEVER, TO BE ON THE SAFE SIDE IT IS RECOMMENDED THAT THIS IS CARRIED OUT MANUALLY AS A MATTER OF COURSE.

1. BACK FLUSH THE MEDIA FILTERS IN ACCORDANCE WITH THE MANUFACTURERS INSTRUCTIONS ESPECIALLY IF YOU HAVE BEEN OPERATING IN WATERS WITH A HIGH SEDIMENT CONTENT. A HANDY SCHEMATIC CAN BE FOUND OVERLEAF.
2. DEPRESS THE LOW PRESSURE PUMP SWITCH TWICE ON EACH UNIT. THIS WILL INITIATE THE FRESH WATER FLUSH CYCLE.
3. THE UNITS WILL SWITCH OFF THE CYCLE AFTER A PERIOD OF SIX OR SEVEN MINUTES. PLEASE ENSURE THAT THE UNITS HAVE INDEED SWITCHED THEMSELVES OFF!

Press the LPP Switch Twice to Start the Flush Cycle
